

Head of Product Management

Location: Flexible (Bay Area / Chicago preferred)

Type: Full-time, Executive

About SWARM

SWARM is redefining how decisions get made in agriculture, food, and industrial supply chains. Our AI-powered platform combines advanced optimization with agentic intelligence, giving leaders real-time decision intelligence where ERP dashboards fall short. From optimizing grain logistics to rethinking protein distribution, we help the world's most critical industries adapt faster, save costs, and unlock growth.

Backed by leading investors and trusted by global enterprises, we are scaling fast and we're looking for a Head of Product to lead the charge.

The Role

The Head of Product Management will own SWARM's vision and execution across our two-layer product architecture: the **ENGINE**(optimization backbone) and **AVA** (our agentic AI layer). You'll partner directly with the CEO, CTO, customers, and field teams to sharpen our roadmap, bring new capabilities to life, and ensure we deliver not just software, but transformational outcomes for customers.

This is a role for a builder and a strategist: someone who can zoom out to market-defining vision and zoom in to sprint planning with engineers.

What You'll Do

- **Lead Product Roadmap:** Define and communicate the product roadmap aligned to SWARM's strategy and customer needs.
- **Customer First:** Engage directly with food, ag, and industrial customers to deeply understand their planning and operational challenges and turn insights into product priorities.
- **Execution Excellence:** Partner with engineering to deliver high-quality, scalable features that bridge optimization with AI agents.
- **Market Differentiation:** Position SWARM as the category leader by identifying where our platform can create unique defensibility.
- **Team Leadership:** Build and lead a small but high-leverage product team that thrives on speed, clarity, and execution discipline.
- **Go-to-Market Partnership:** Work with sales, marketing, and customer success to drive adoption and accelerate time-to-value.

What You Bring

- 7+ years in product management with at least 3 years leading product teams in SaaS, AI, optimization, or supply chain domains.
- Strong track record of building and scaling enterprise products that deliver measurable business outcomes.
- Fluency in **AI/ML concepts** and **optimization/operations research** (you don't need to code, but you need to know what's possible).
- Experience working with enterprise customers in food, agriculture, supply chain, or industrial sectors preferred.
- Strategic storyteller who can align execs, engineers, and customers around a common product vision.
- Builder's mindset: thrives in fast-moving, resource-constrained environments.

Why SWARM

- **Impact that matters:** Your work helps secure food systems and supply chains in a decade of volatility.
- **Cutting-edge AI:** Shape a platform at the frontier of optimization + agentic intelligence.
- **High-visibility role:** Report directly to the CEO, work with a top-tier board, and lead a core function at the company.
- **Growth trajectory:** SWARM is on the path towards multi-million in ARR and beyond. You'll help define how we get there.
