ATTN: AI Evaluation Hiring Team

Hi,

I am excited to apply for the Insurance Subject Matter Expert - AI Evaluation position at Datamundi. I bring 10+ years of insurance domain expertise (trucking, health, crop) combined with hands-on AI evaluation and prompt engineering experience.

At Roger, I led a trucking insurance compliance product from 0-1, building systems that validated carrier insurance against FMCSA requirements and increased ARR by 20%. I have also developed AI applications for health insurance enrollment and crop insurance risk assessment. This gives me direct experience applying LLMs to underwriting and claims workflows.

I work daily with prompt engineering, evaluation rubrics, and golden response development. I validate AI outputs for accuracy, bias, and compliance, particularly around sensitive data like PHI. I collaborate effectively with data science teams while providing the insurance context needed to improve model performance.

I would welcome the opportunity to discuss how my combined insurance and AI evaluation experience can contribute to Datamundi's client success. Thank you for your consideration.

Sincerely,
Mara Jorgensen
